

Primavera Contract Management 14 Upgrade Information

As part of Hill International's program of continuous improvement, the Primavera Contract Management (PCM) site was upgraded to version 14 on July 1, 2012. The PCM 14 user interface is identical to the older PCM 13 version. The difference is the underlying technology which has been completely replaced with Oracle products. This change of technology will mostly like cause you two problems the next time you use the site.

1. The supported Java version required for PCM 14 is Java 6 update 31. It is available on the Hill Project Control Systems page, <http://projectcontrols.hillintl.com>.

If you would like to test your Java version, go to <http://www.java.com/en/download/testjava.jsp>

2. When you login to PCM, your user name is the same but your password has changed. Whatever your password was previously, all letters were changed to uppercase letters by the Oracle migration tool. In example:

Old password: Logmein#1492
New password: LOGMEIN#1492

After you login, you can change your password:

Right click on All Projects and select User Settings
Click Change Password
Enter Old Password followed by New Password and Confirmation Password, then click OK
Click OK when box pops up notifying you that the change was successful
Click Save
